ABOUT ME

My laziness brought me to the world of automation and my strongest skills are about automation testing. I always try to improve testing by keeping in mind the goal of the project, and primarily the quality of the deliverables. When I worked directly with customers I made sure to give them an accurate feedback by reporting them an overall and understandable summary of the progress of the testing. My focus was on reporting bugs to the dev team, trying to give them as much information as I could and - if possible - a way to find the root cause together in order to avoid new bugs. I do believe quality starts from process and it should be moved as much to the "left" as possible.

"If I had six hours to chop down a tree I'd spend the first four hours sharpening the axe."

Abraham Lincoln

Apart from learning to light a fire without a match, when I was a boy scout I learnt to work in a team. This experience showed me how important it is to train juniors, in order to create a strong team that believes in leaders and not in bosses. I do believe that the best way to solve problems is scientific thinking - even when a boar is running towards you. Quick thinking is just as important as experience, both are tools that must be continuously practiced and called into question. I always try to think outside the box, and I believe that anybody who is part of a team, regardless of their seniority or role, can, on the basis of their experience, contribute to finding solutions. I've worked directly with customers, an experience that taught me how to deal with difficult situations, bearing in mind both technical and business values, and how important it is to interact with human beings while always staying professional. I strongly believe in "agile" frameworks, which led me to try to timebox my girlfriend's shopping, and their usages with a look at the practice and not only at the theory. A lot of times low confidence in agile methodology stems from teams being trained only by-the-book, without any advice about facing real-life challenges.

"I choose a lazy person to do a hard job. Because a lazy person will find an easy way to do it."

Bill Gates

Gabriele Cafiero

QUALITY ASSURANCE

JOB EXPERIENCE

Generali Italia | March 2024 - ...

At Generali I work as **Test Automation & AI Architect**, setting the guidelines for a **centralized framework** that everyone can easily use and update. I **leveraged AI to automate** processes that were expensive in terms of human and economic cost. I have presented the project and the product I worked on a significant number of times, even in front of **hundreds of colleagues**. I support colleagues with their technical difficulties, always trying to automate the process so that I don't become a bottleneck, but rather an **enabler and facilitator** of their daily work.

Intesa Sanpaolo | April 2022 - February 2024

In Intesa Sanpaolo I worked as **Test and Release Manager** in the Accounting Team. I helped introduce new **quality processes** and build quality standards inside the team itself. I was selected to be the **Tech Lead** for the Quality Assurance team of my area, leading **about ten colleagues** and creating a **Community of Practice**. I improved my "Scrum Master" skills by often facilitating the meetings of an internal side project.

Cleafy | September 2021 - April 2022

In Cleafy I worked as **QA Engineer**. As the team was evolving I tried to spread **Agile culture** (using the Scrum framework) and became the **de facto Scrum Master**. I think **quality starts from the process** and I see the Scrum Master role as a natural evolution of the QA role. Without a good process and a team working cohesively with a clear idea of their goals, quality is harder to reach.

Deltatre | April 2020 - September 2021

In Deltatre I worked as **QA Engineer** in a Scrum Team. My personal goal was **spreading a QA approach from the beginning**: challenging the PO about the acceptance criteria and the Devs about pushing code coverage higher and higher, helping them when needed, even **writing unit tests in pair**. My favorite moment was when devs started using the testing tool I wrote and one of them said **"Testing is funny, now"**.

RGI | October 2016 - April 2020

I started at RGI as a **manual tester**, but very soon switched to **automation** with the tool we used at the time (UFT). Shortly after I was in charge of creating a new testing project for the company product using **Selenium with Java**. It was very important to create **shared standards** as the project had a lot of contributors. During the last two years I spent more time with **clients** than programming (while collaborating daily with the testing team). I understood the importance of a **strong but flexible and adaptive process**, as customers change ideas frequently and you need to be prepared for that.

AMBITION

I would like to become a reference figure for juniors and colleagues, and to manage a project and a team. I feel I can put my experience at the service of good quality work and, as a consequence, of a reliable product.

HOBBIES & PASSIONS

Stand-up comedy. I perform on stage, so I'm used to talking to people and relating to anyone, reacting to the unexpected and still bringing the result home. On stage, the result is laughter.

Sailing. Sailing teaches how important it is to be able to fend for yourself when facing unexpected difficulties (which should stay unexpected only the first time: then you learn the lesson) and how important a reliable, indispensable crew is, when you have one, to hold the course and reach the destination.
